which makes the bacterium harboring the protein L-threonine-resistant, and wherein the protein comprises the amino acid sequence shown in SEQ ID NO: 4.

- 12. (New) The bacterium according to claim 11, wherein L-homoserine resistance of said bacterium is further increased by increasing an activity of a protein which makes the bacterium harboring the protein L-threonine-resistant, and wherein the protein comprises the amino acid sequence shown in SEQID NO: 2.
- 13. (New) The bacterium according to claim 11, wherein said activity of the protein which makes the bacterium harboring the protein L-threonine-resistant is increased by transformation of said bacterium with DNA coding for the protein.
- 14. (New) The bacterium according to claim 12, wherein said activity of the protein which makes the bacterium harboring the protein L-threonine-resistant is increased by transformation of said bacterium with DNA coding for the protein.
- 15. (New) The bacterium according to claim 12, wherein said activity of the protein which makes the bacterium harboring the protein L-homoserine-resistant is increased by transformation of said bacterium with DNA coding for the protein.
- 16. (New) An isolated DNA which encodes a protein which has the amino acid sequence of SEQ ID NO: 4.
- 17. (New) The DNA of claim 16, which is a DNA defined in the following (a) or (b):
- (a) a DNA which comprises the nucleotide sequence of nucleotide numbers 187 to 804 in SEQ ID NO: 3;
- (b) a DNA which is hybridizable with a nucleotide sequence of nucleotide numbers

  187 to 804 in SEQ ID NO: 3 under a stringent condition, and encodes a protein having an activity of making a bacterium having the protein L-threonine-resistant, wherein the stringent

condition is a condition in which washing is performed at 60°C, and at a salt concentration corresponding to 1 x SSC and 0.1% SDS.

18. (New) A method of producing an amino acid, comprising:

cultivating the bacterium as defined in claim 11, which has an ability to produce the amino acid, in a culture medium, to produce and accumulate the amino acid in the medium, and

recovering the amino acid from the medium.

- 19. (New) The method according to claim 18, wherein said amino acid is selected from the group consisting of L-homoserine, L-threonine, and branched chain amino acids.
- 20. (New) The method according to claim 18, wherein said amino acid is L-homoserine.
  - 21. (New) The method according to claim 18, wherein said amino acid is L-

SUPPORT FOR THE AMENDMENTS

## Coheludid threonine .--

Newly added Claims 11-21 are supported by the specification at pages 2-36 and by original Claims 1-10. No new matter is believed to have been added to this application by these amendments.

## **REMARKS**

Claims 11-21 are pending. Favorable reconsideration is respectfully requested.

Applicants confirm the election of Group I, drawn to DNA encoding proteins and bacteria. Newly added Claims 1-17 recite the elected subject matter. Applicants have also added Claims 18-21. These claims are directed to a method of use of the invention of Group
